

DOCK DOOR SIGNS

By the warehouse identification & marking specialists

Highly visible dock door signs are a defining feature of any distribution center. Often seen outside and positioned above the loading dock doors or on the internal side of doors, both provide a reference for the door. Internal and external are produced from different materials to cope with the very different environments, while being cost-effective.

Internal dock door signs are a low-cost product. Produced using PVC board material, which is rigid and durable, they are usually attached to the door, to the wall next to the door or above where roller doors are used.

External loading bay door signs are exposed to the elements and significant temperature variations. As a result, the materials used are more hardwearing and durable in nature. Aluminum composite is used which is an aluminum sheet sandwich with a plastic core. Combined it creates a rigid and very durable sign board. It does not perish, corrode, and can be drilled and formed as needed.

Almost any content can be added with the latest print to board technology. Customers are increasingly asking for branded signs to create a professional appearance, and to reinforce company values. Our design team will create the layout and finish that you need.

Additional Information:

- Fast and easy to install,
- Standard sizes available,
- Range of optional colors,
- Print to board technology,
- Long lifespan options,
- Full installation service available.

Color options available.

Any application temperature.

Can be drilled.

Good resistance to sunlight.

Washable.

Temporary and permanent attachment.

Can be used in freezers.

Light, chemical and moisture resistant.

Installation services available.
