

MAX LOAD LABELS

By the warehouse identification
& marking specialists

Max load labels are designed to provide the safe load capacity limits of pallet racking and storage shelves. ASG Services produce unique designs for customers or from our standard range of designs developed for various industry trends. All are available, in any size or color format as required.

Load labels are produced in the same way as our premium rack labels. Laminated polyester is utilized for extra durability, helping extend the lifespan of the label. Permanent adhesive, cold store adhesive and magnetic backings are available for use in ambient and chilled storage facilities.

The laser print process used to produce load labels gives outstanding clarity and with the right colors, these can be found and read with ease.

Max load capacity labels have many features including:
